## **PCT**

NOTIFICATION CONCERNING SUBMISSION OR TRANSMITTAL OF PRIORITY DOCUMENT

(PCT Administrative Instructions, Section 411)

To

G.E. EHRLICH (1995) LTD. 11 Menachem Begin Street 52521 Ramat Gan ISRAEL

Date of mailing (day/month/year) 16 August 2006 (16.08.2006)			
Applicant's or agent's file reference 30480	IMPORTANT NOTIFICATION		
International application No. PCT/IL2006/000015	International filing date (day/month/year) 04 January 2006 (04.01.2006)		
International publication date (day/month/year) 13 July 2006 (13.07.2006)	Priority date (day/month/year) 04 January 2005 (04.01.2005)		
Applicant DUNE MEDICAL DEVICES LTD. et al			

- 1. By means of this Form, which replaces any previously issued notification concerning submission or transmittal of priority documents, the applicant is hereby notified of the date of receipt by the International Bureau of the priority document(s) relating to all earlier application(s) whose priority is claimed. Unless otherwise indicated by the letters "NR", in the right-hand column or by an asterisk appearing next to a date of receipt, the priority document concerned was submitted or transmitted to the International Bureau in compliance with Rule 17.1(a) or (b).
- 2. (If applicable) The letters "NR" appearing in the right-hand column denote a priority document which, an the date of mailing of this Form, had not yet been received by the International Bureau under Rule 17.1(a) or (b). Where, under Rule 17.1(a), the priority document must be submitted by the applicant to the receiving Office or the International Bureau, but the applicant fails to submit the priority document within the applicable time limit under that Rule, the attention of the applicant is directed to Rule 17.1(c) which provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.
- 3. (If applicable) An asterisk (\*) appearing next to a date of receipt, in the right-hand column, denotes a priority document submitted or transmitted to the International Bureau but not in compliance with Rule 17.1(a) or (b) (the priority document was received after the time limit prescribed in Rule 17.1(a) or the request to prepare and transmit the priority document was submitted to the receiving Office after the applicable time limit under Rule 17.1(b)). Even though the priority document was not furnished in compliance with Rule 17.1(a) or (b), the International Bureau will nevertheless transmit a copy of the document to the designated Offices, for their consideration. In case such a copy is not accepted by the designated Office as the priority document, Rule 17.1(c) provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.

		·			
1.	This international preliminary report on patentability (Chapter I) is issued by the International Bureau on behalf of the International Searching Authority under Rule 44 bis. I(a).				
2.	This REPORT consists of a total	of 6 sheets, including this cov	rer sheet.		
	In the attached sheets, any refere to the international preliminary re	nce to the written opinion of teport on patentability (Chapte	he International Searching Authority should be read as a reference r I) instead.		
. 3.	This report contains indications i	relating to the following items	:		
•	Box No. I	Basis of the report			
	Box No. II	Priority			
	Box No. III	Non-establishment of opini applicability	on with regard to novelty, inventive step and industrial		
	Box No. IV	Lack of unity of invention	·		
	Box No. V	Reasoned statement under applicability; citations and	Article 35(2) with regard to novelty, inventive step or industrial explanations supporting such statement		
1	Box No. VI	Certain documents cited			
	Box No. VII	Certain defects in the international application			
	Box No. VIII	Certain observations on the international application			
4.	4. The International Bureau will communicate this report to designated Offices in accordance with Rules 44bis.3(c) and 93bis.1 but not, except where the applicant makes an express request under Article 23(2), before the expiration of 30 months from the priority date (Rule 44bis.2).				
	•

Supplemental Box	
In case the space in any of the pre	ceding boxes is not sufficient.

#### V. 2. Citations and Explanations:

Claims 1-4, 10, 13-31, 36-43 and 69 lack novelty under PCT Article 33(2) as being anticipated by Bambot et al. Bambot et al. disclose an endoscope that uses optical fibers to serve as a nonirradiative electromagnetic sensor (column 10, lines 27 through column 11, line 14). They disclose that their invention can be used in various situations, such as in vivo detection of diseased tissues (i.e cancerous tissues) (column 3, lines 60-67). Their invention includes a processor (44), as well as a frequency synthesizer (46) and a detector (56). See Figure 1. The endoscope is introduced into a natural lumen or a cavity of a patient's body, such as an oral cavity, a nostril, etc. (column 4, lines 1-18). Their endoscope includes an optical fiber bundle (54) that serves as a communication line (column 10, lines 27-36). The endoscope further includes a long body portion that may be inserted into a body of the patient (i.e. intracorporeal portion) as well as a hande (i.e. extracorporeal portion) that can be used for positioning the endoscope (column 10, lines 37-54). They further disclose that a device (i.e. second instrument) may be positioned on a distal end of the endoscope (column 10, lines 37-44). The device may be used to remove tissue samples from a patient (i.e. biopsy), introduce a dose of medication to a target tissue, or be used to deliver therapeutic radiation (column 10, lines 37-44). Bambot et al. further disclose a method using their invention for tissue characterization (column 11, lines 46-60).

Claims 5-7, 44-45, and 47-50 lack an inventive step under PCT Article 33(3) as being obvious over Bambot et al. in view of Bladen et al. Bambot et al. do not disclose that the nonirradiative electromagnetic sensor may be removed and replaced with another instrument. Further, they do not disclose that their endoscope further includes a catheter that can extend beyond a distal-most end of the endoscope and can be manipulated independently of the endoscope. Bladen et al. disclose an endoscope wherein a sensor can be placed inside the biopsy channel of an endoscope (pg.6-7, paragraphs [0102]-[0103]). They further disclose that the endoscope passes the sensor down the tip of the biopsy channel until it reaches the tip of the endoscope (pg. 7, paragraph [0106]). The sensor is encapsulated within a hollow tubular catheter which is routinely used with endoscopes (pg. 7, paragraph [0106]). The catheter can then be withdrawn (pg. 7, paragraph [0106]). At the time of the invention, it would have been obvious to one of ordinary skill in the art to include with the endoscope of Bambot et al. a removable sensor, as well as a catheter. The motivation for doing so would have been to provide information about the path of the endoscope and catheters are routinely used with endoscopes, as taught by Bambot et al. (pg. 6, paragraph [0101] and pg. 7, paragraph [0106]).

Claims 8-9 and 32 lack an inventive step under PCT Article 33(3) as being obvious over Bambot et al. in view of Nakaichi et al. Bambot et al. do not disclose that the intracorporeal portion further includes an optical channel for an optical instrument, nor that that the optical instrument is configured to observe the nonirradiative electromagnetic sensor. Nakaichi et al. disclose an endoscope for optically

Form PCT/ISA/237 (Supplemental Box) (April 2005)

International application No. PCT/IL06/00015

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

observing the body cavity of the patient (column 1, lines 7-17). They further disclose that an image transmitting optical fiber bundle and an illumination light transmitting optical fiber bundle are incorporated within the insertion unit of the endoscope (i.e. intracorporal portion) (column 6, lines 44-56). At the time of the invention, it would have been obvious to one of ordinary skill in the art to have included an optical channel for an optical instrument, and have the optical instrument configured to observe the nonirradiative electromagnetic sensor. The motivation for doing so would have been to be able illuminate the cavity and enable an image of the body cavity to be observed as taught by Nakaichi et al. (column 1, line 65 through column 2, line 6).

Claims 11-12 and 33-35 lack an inventive step under PCT Article 33(3) as being obvious over Bambot et al. in view of Nevo et al. Bambot et al. do not disclose that the second instrument is selected from the group consisting of an optical sensor, an x-ray sensor, an ultrasound sensor, an MR sensor, etc., nor that the second instrument is configured to sense the nonirradiative electromagnetic sensor. Nevo et al. discloses that their invention includes the use of a separate set of tracking coils for tracking purposes (i.e. electromagnetic sensor), and a separate set of imaging coils for imaging purposes (i.e. MR sensor) (pg. 6, paragraph [0076], pg.3, paragraph [0029]). At the time of the invention, it would have been obvious to one of ordinary skill in the art to include in the invention of Bambot et al. a second instrument selected from group listed above. The motivation for doing so would have been to enable the instrument to image selected areas within the body cavity, as taught by Nevo et al. (pg.3, paragraph [0028]).

Claim 46 lacks an inventive step under PCT Article 33(3) as being obvious over the prior art as applied in the immediately preceding paragraph and further in view of Nevo et al. Bambot et al. in view of Bladen et al. do not disclose that the sensor for tissue characterization is selected from the group consisting of an optical sensor, an x-ray sensor, an MR sensor etc. Nevo et al. disclose that their invention includes the use of a separate set of tracking coils for tracking purposes (i.e. electromagnetic sensor), and a separate set of imaging coils for imaging purposes (i.e. MR sensor) (pg. 6, paragraph [0076], pg.3, paragraph [0029]). At the time of the invention, it would have been obvious to one of ordinary skill in the art to include in the invention of Bambot et al. a sensor selected from the group listed above. The motivation for doing so would have been to enable the instrument to image selected areas within the body cavity, as taught by Nevo et al. (pg.3, paragraph [0028]).

Claims 59-62 lack novelty under PCT Article 33(2) as being anticipated by Nevo et al. Nevo et al. disclose an endoscopic examining apparatus that has an integrated imaging and tracking capability (pg. 3, paragraph [0026]). The tracking system uses miniature sensors that senses electromagnetic fields generated by an MR scanner (pg. 3, paragraphs [0024] and [0025]). The probe has a hollow construction in which a guidewire may be inserted for injection of contrast material, biopsy, or for other diagnostic or interventional procedures that may be required (pg. 4, paragraph [0038]). They further disclose that their invention includes the use of a separate set of tracking coils for tracking purposes (i.e. electromagnetic sensor), and a separate set of imaging coils for imaging purposes (i.e. MR sensor) (pg. 6, paragraph [0076], pg.3, paragraph [0029]).

Claims 51-58 and 63-68 lack an inventive step under PCT Article 33(3) as being obvious over Nevo et al. in view of Bambot et al. Nevo et al. do not disclose that a second instrument is inserted, mounted on a second communication line, intracorporeally, along the guide wire. They also do not disclose that the instrument can be a biopsy instrument, configured for localized surgery, or for dispensing medication. Bambot et al. disclose that a separate device (i.e. instrument) may be included with the endoscope and used to remove tissue samples from a patient, introduce a dose of medication, or emit therapeutic radiation (column 10, lines 37-44). At the time of the invention, it would have been obvious to one of ordinary skill in the art to include with the endoscope a second instrument. The motivation for doing so would have been to be able to perform multiple functions, as taught by Bambot et al. (column 10, lines 37-44).

Claims 1-69 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
